- Cloud Store, Authentication, Cloud Functions, Hosting

SIDE PROJECTS

Real-time Chat Application
🔗 https://github.com/JeonghakHeo/Real-Time-Chat

A **Javascript**-based real-time chat application
This web application allows users to chat via the app
It consists of four different chat rooms that each room has own section which is responsible for showing different chats based on user's selection
It uses **Cloud Firestore** to store chat data

## Weather App
🔗 https://github.com/JeonghakHeo/Weather-app

A web application that shows the current local weather based on user input
The application is built with **Javascript**, using modern **ECMAScript6** features
It allows users to type the city they want to check the weather of
Once the form submitted, it sends an **API** request to designated server and displays the current local weather condition on the browser
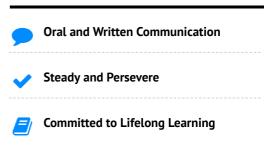

UI Library
🔗 https://github.com/JeonghakHeo/UI-Library

A **JavaScript**-driven project, designed to keep progressing to have multiple UIs
It uses **Bable** & **Webpack** for browser compatibility support

PROGRAMMING

JavaScript

HTML & CSS

Firebase

STRENGTHS

💬 **Oral and Written Communication**

✔️ **Steady and Persevere**

📖 **Committed to Lifelong Learning**

LANGUAGES

English
Fluent

Korean
Native

FUTURE STUDY

React	Redux	MongoDB	Express
Node.JS	Firebase	Bootstrap	Sass
Webpack	RegEx	jQuery
